## April 15, 2007 - Distance from Sun 15 AU

Planet X incoming from below the ecliptic. Ideal position for start of continuous observation by the South Pole Telescope (SPT).

### Solar Cycle 24

- Early Signs Aug-2006
- Four X-Class Flares Dec-2006
- SPT Operational Early 2007
- Highest Activity in 400 Years

Intended for Discussion Only

## May 15, 2009 - Distance from Sun 1.1 AU

Below the asteroid belt, the object becomes bright enough for amateurs in the Southern hemisphere to see. Viewing requires high-powered binoculars or small telescope.

### Viewing Guide

- *Faint Reddish Object*
- *Telescopes or Binoculars*
- *Viewing Varies with Location*

## Planet X Forecast for April 2007 to July 2014

Intended for Discussion Only

**May 15, 2011 - Distance from Sun 6.4 AU**

Almost due South of Earth, it becomes bright enough for naked-eye observation in the Southern hemisphere.

### Viewing Guide

- Easily Noticable
- Dimly Visible During the Day
- Bright Reddish Object at Night

Saturn

Earth

Sun

Mars

Jupiter

Planet X

Intended for Discussion Only

## December 21, 2012. - Distance from Sun 3.0 AU

Passes through ecliptic plane and triggers strong electrical interaction with Sun. Object will appear as a second Sun. It will be bright red and approximately the size of the moon. Viewing times will vary.

### Cataclysm Possibilities

- Asteroid Impacts w/Tsunamis
- Major Quakes w/Tsunamis
- Volcano Eruptions

## Planet X Forecast for April 2007 to July 2014

Intended for Discussion Only

**Feb 14, 2013 - Distance from Sun 2.85 AU**

Planet X passes through perihelion, and maximum electrical interaction with Sun begins. This is the most catastrophic period for Earth and peaks when Earth moves between Planet X and the Sun.

**Cataclysm Possibilities**

- *Supervolcano Eruptions*
- *Nuclear Winter/Ice Age*
- *Earth Shifts on Axis*

# Mother Shipton

...And when the dragon's tail is gone,  
Man forgets, and smiles, and carries on...

His masked smile - his false grandeur,  
Will serve the Gods their anger stir.  
And they will send the Dragon back  
To light the sky - his tail will crack  
Upon the earth and rend the earth...

# July 14, 2013 - Distance from Sun 3.3 AU

Planet X appears smaller, but is still visible as a second sun, and now it has a massive tail. The intensity of Earth's cataclysms now begins to diminish as interaction with the Sun reduces. If Planet X is a brown dwarf in an unstable orbit around our Sun, its orbit could shorten in duration like Hale Bopp in 1997 as suggested by Mother Shipton's prophecy.

**July 14, 2013 • Distance from Sun 3.3 AU**

Possible connection with the "Bearded Star" prophecy of Michel de Nostredame. It will be continuously visible with the naked eye from Paris, and will appear as a smaller, reddish-sun with a long tail. Ground observers will find it near the North Pole Star.

**Nostradamus - C6:Q6**

There will appear towards the North  
Not far from Cancer the bearded star:  
Susa, Siena, Boeotia, Eretria,  
The great one of Rome will die, the night over.

## July 1, 2014 - Distance from Sun 5.6 AU

Planet X is moving away from the core of the Solar system. Earth enters another period of relative quiescence. The few who survive begin rebuilding civilization.

Nostradamus scholars interpret his prophecies as saying humanity will go to the stars and the Earth will be destroyed in 3786 or 3797.
